How to replace light bulbs, fluorescent tubing internally and externally?

<https://www.youtube.com/watch?v=clhuCU5VKJY>

How to reset trip switch?

Turn off all the lights and unplug everything in the affected room or rooms.

Take a flashlight and open the circuit breaker panel so you can see the circuit breakers. Each breaker has three positions: **on**, **off**, and a centre position.

Look for the circuit breaker with the switch in the centre position.

Flip the switch to **off**, and then flip it to **on**.

Wait a moment to see if the switch stays in the **on** position. If it does, the circuit breaker is reset and power is restored to the room. If the switch doesn't stay in the **on** position, it indicates a serious wiring problem if so contact CHAZ Bot.
